## **GREEN PARKING COUNCIL UNVEILS NEW AFFILIATE PARTNERSHIP PROGRAM**

\*\*\*

### ***WELCOMES NAGLE ENERGY SOLUTIONS AS FIRST AFFILIATE PARTNER***

**Hartford, Connecticut** - The Green Parking Council (GPC) announced today it has launched an Affiliate Partner program designed to foster the participation of smaller parking facility operators and parking industry vendors and service providers in pursuing the GPC's mission to extend innovative environmental technologies and green operational practices throughout the parking industry.

Concurrently, the GPC welcomed as its first affiliate partner Nagle Energy Solutions (NES), a green-technology consulting and installation company specializing in the application of innovative garage ventilation technologies that incorporate carbon monoxide (CO) sensor equipment.

"Participation in the Green Parking Council gives NES a platform to communicate the economic and environmental benefits of our products" said Founding Principal Frank Nagle. "I am confident that involvement in the Council will not only expand our organization's reach but will also serve as a useful tool in understanding what our client is looking for in the products we sell."

Affiliate Partners of the Green Parking Council are able to plug into the organization's network of parking facility owners, operators, technology vendors and thought leaders; leverage their ability to contribute to the sustainable parking movement; and promote their affiliation with the growing sustainability movement in parking. Product vendors or service providers with ten (10) or less employees and parking facility owners and operators operating in only one market are eligible for the new program. Full details are available at <http://www.greenparkingcouncil.org/partners/affiliate-partnership>

"As the GPC continues its mission, it is important that we promote smaller innovators and that's what the Affiliate Partner Program does," explained Paul Wessel, Executive Director of the GPC. "Frank has been a contributing member of the GPC's Sustainable Technologies Committee for some time, so it's fitting that NES be part of helping the GPC introduce the new program. CO sensor system technology has taken a quantum leap in the past few years, as it converges with stricter energy efficiency and health and safety standards at the local and state levels. Nagle Energy Solutions' collaboration helps ensure the GPC is at the forefront of this sea change for the benefit of our members."

**The Green Parking Council (GPC)** is a nonprofit organization providing leadership and oversight for the green conversion of parking facilities to sustainable, environmentally responsible assets. GPC is dedicated to expanding green parking practices and environmental services through its Certified Green Garage rating system.

GPC encourages new, alternative parking practices and exceptional industry transformation through creative thought and ingenuity. By challenging garage owners and managers to collaborate and create open-sourced, sustainable best practices, the parking industry can positively impact the environment.

**Nagle Energy Solutions (NES)** is a green technology consulting, sales and installation company providing expert strategies and superior technologies designed to dramatically improve commercial property operating efficiencies and, as a result, generate sizable energy savings. NES sells and installs innovative CO sensor

systems developed by Air Test Technologies. Its sales, installation and service capabilities extend to all major U.S. markets.
